OFFOR STEM SPLITTER

Complete User Manual

Product: Offor Stem Splitter
Developer / Publisher: ONNTECH
Product Brand: OFFOR AUDIO
Version: 1.0.0
Platform: Windows
Application Type: Standalone Desktop Application

---

1. Welcome to Offor Stem Splitter

Thank you for using **Offor Stem Splitter**.

Offor Stem Splitter is an audio source-separation application designed to help musicians, producers, engineers, DJs, content creators, and audio enthusiasts separate a mixed song into individual musical components.

A typical song may contain:

- Vocals
- Drums
- Bass
- Other instruments

Offor Stem Splitter processes the mixed recording and produces separate audio stems that can be reviewed, played back, muted, soloed, exported, and imported into a Digital Audio Workstation (DAW).

A typical workflow is:

Load → Separate → Review → Export → Import into DAW → Produce

---

2. What Offor Stem Splitter Does

Offor Stem Splitter analyzes a mixed audio recording and estimates the individual sources contained within it.

For example:

```
Original Recording

Vocals + Drums + Bass + Instruments
```

can become:

```
Vocals
Drums
Bass
Other
```

The resulting stems can then be used for:

- Remixing
- Instrumental creation
- Vocal processing
- Sampling
- Music production
- Audio editing
- Music analysis
- Practice
- Re-arrangement
- Creative sound design

---

3. Important: Stem Separation Is an Estimate

Offor Stem Splitter does **not** recover the original studio multitrack recordings.

The application performs source separation and estimates which parts of the mixed recording belong to each stem.

Because of this, some unwanted material may remain in a stem.

For example:

- Small amounts of drums may remain in vocals.
- Vocal material may remain in instruments.
- Reverb may appear in multiple stems.
- Bass harmonics may appear outside the bass stem.
- Stereo effects may not separate perfectly.
- Dense mixes may produce artifacts.

This is normal for AI/source-separation technology.

The quality of the result depends heavily on the original recording.

---

4. Recommended Source Audio

For the best possible results, use the highest-quality source available.

Recommended

- WAV
- FLAC
- Other lossless audio
- High-quality audio exports
- Original master recordings

Avoid when possible

- Extremely low-bitrate MP3 files
- Audio that has been repeatedly re-encoded
- Severely clipped recordings
- Extremely noisy recordings
- Recordings with extreme distortion

If you have both an MP3 and WAV version of the same song, use the WAV version.

---

5. System Requirements

Offor Stem Splitter is designed for Windows.

Operating System

Windows 10 or newer

For the best experience, keep Windows updated.

Recommended Hardware

Processing performance depends on the length of the audio and the separation system.

A faster computer can generally process audio more quickly.

Recommended:

- Modern multi-core CPU

- Adequate RAM
- Sufficient free disk space
- Updated Windows installation

Longer audio files require more processing time and storage than shorter files.

---

6. Standalone Application

Offor Stem Splitter is currently a **Standalone desktop application**.

This means you launch it directly from Windows rather than loading it as a plugin inside a DAW.

For example:

```
Windows
   │
   ├── Offor Stem Splitter
   │
   └── Cubase
```

The two applications operate independently.

You can process audio in Offor Stem Splitter and then import the resulting stems into your DAW.

---

7. Working With DAWs

Offor Stem Splitter currently works with DAWs through **exported audio files**, rather than through a VST3 connection.

The workflow is:

```
Song
 ↓
Offor Stem Splitter
 ↓
Source Separation
 ↓
Separated Stems
 ↓
Export
```

```
  ↓
Cubase / FL Studio / REAPER / etc.
```

The DAW does not run the separation engine.

The DAW simply receives the exported audio files.

---

8. Cubase Workflow

To use the stems with Cubase:

1. Open Offor Stem Splitter.
2. Load the song.
3. Start separation.
4. Wait for processing to finish.
5. Review the stems.
6. Export the stems.
7. Open Cubase.
8. Open or create a project.
9. Import the exported stems.
10. Place each stem on its own audio track.

Example:

```
Cubase

Track 1 — Vocals
Track 2 — Drums
Track 3 — Bass
Track 4 — Other
```

You can then mix and process the stems normally.

---

9. Drag and Drop Into a DAW

After exporting, locate the exported files using Windows File Explorer.

For example:

```
Vocals.wav
Drums.wav
```

```
Bass.wav
Other.wav
```

These files can be dragged into a compatible DAW.

Because they are ordinary audio files, the DAW does not need to know that they were generated by Offor Stem Splitter.

---

10. Compatible DAWs

The exported stems can be used with DAWs that support the selected audio format.

Examples include:

- Cubase
- FL Studio
- REAPER
- Ableton Live
- Studio One
- Pro Tools
- Other compatible DAWs

The current application does **not** require a VST3 version for this workflow.

---

11. VST3 vs Standalone

The current Offor Stem Splitter release is standalone.

A VST3 plugin would be a different type of integration.

The current standalone workflow allows users to:

1. Process audio independently.
2. Review the separated stems.
3. Export the results.
4. Import the stems into practically any compatible DAW.

Offor Stem Splitter should therefore be treated as a standalone stem-production utility.

---

12. Loading Audio

Launch Offor Stem Splitter and load the audio you want to process.

After the audio is loaded, the application prepares it for separation.

Before beginning processing, make sure the correct audio file has been selected.

Use the highest-quality source available whenever possible.

---

13. Starting Separation

Start the separation process using the application's separation control.

Offor Stem Splitter will process the selected audio and generate the separated stems.

Processing may take some time depending on:

- Audio length
- Computer performance
- Separation model
- Available system resources

Important

Do not close the application while processing is active.

A long processing time does not necessarily mean that the application has frozen.

Use the application's status and progress information to monitor the operation.

---

14. Processing Time

Processing time depends on several factors:

- Audio length
- CPU performance
- GPU availability and use
- RAM
- Separation model
- Model configuration
- System load

- Storage performance

A three-minute song and a one-hour recording should not be expected to process in the same amount of time.

---

15. Separated Stem Tracks

Offor Stem Splitter provides separate stem tracks for the major musical components.

The primary categories are:

- Vocals
- Drums
- Bass
- Other

Each stem has its own track controls and waveform display.

---

16. Vocals Stem

The **Vocals** stem contains the estimated vocal material.

This can include:

- Lead vocals
- Backing vocals
- Vocal harmonies
- Some vocal effects

The exact result depends on the original recording.

---

17. Drums Stem

The **Drums** stem contains estimated drum and percussion material.

Depending on the source recording, some transient material from other instruments may remain.

---

18. Bass Stem

The **Bass** stem contains estimated bass material.

This may include:

- Bass guitar
- Synth bass
- Other low-frequency musical content

The exact result depends on the original mix.

---

19. Other Stem

The **Other** stem contains musical material that does not primarily belong to the other stem categories.

This may include:

- Guitars
- Piano
- Synths
- Keys
- Strings
- Pads
- Effects
- Other instruments

---

20. Track Selection

Each stem track includes a selection control.

Selection allows the user to identify or work with a particular stem track.

This is useful when reviewing individual stems or working with multiple tracks.

---

21. Mute

The **Mute** control temporarily removes a stem from playback.

For example:

```
Vocals — MUTED
Drums  — ON
Bass   — ON
Other  — ON
```

This allows you to listen to the remaining stems without the muted track.

Mute is useful for:

- Checking vocal removal
- Listening to instrumentals
- Identifying bleed
- Comparing different stem combinations

---

22. Solo

The **Solo** control allows you to listen to an individual stem while checking its separation.

For example:

```
VOCALS — SOLO
```

Solo is useful for identifying:

- Instrument bleed
- Reverb
- Background sounds
- Separation artifacts
- Missing source material

Always listen carefully to difficult sections.

---

23. Waveform Display

Each separated stem provides a waveform representation of its audio.

Waveforms can help identify:

- Silence
- Transients

- Large level changes
- Song sections
- Timing
- Audio activity

However, a waveform is only a visual representation.

Always listen to the audio when judging separation quality.

---

24. Playback

Use the application's playback controls to listen to the separated material.

Playback can be used to compare:

- Full mix
- Vocals
- Drums
- Bass
- Other

Listen carefully to difficult sections rather than judging the entire separation from a short section.

---

25. Auto-Play

The Settings window includes an **Auto-play** option.

When enabled, playback can automatically begin according to the application's playback behavior.

When disabled, playback remains under manual control.

---

26. Loop Selection

The Settings window includes **Loop Selection**.

Looping is useful when repeatedly inspecting a difficult section.

Examples include:

- Vocal-heavy choruses
- Drum fills

- Bass-heavy sections
- Dense instrumental passages
- Sections containing significant reverb

Looping allows you to repeatedly inspect the selected material without replaying the entire song.

---

27. Settings

Open **SETTINGS** to configure available application preferences.

The Settings interface contains controls for:

Playback

- Auto-play
- Loop Selection

Export

- Export format
- Normalize

License

- Activation status
- License activation

The Settings window also provides a **CLOSE** button.

---

28. Export Formats

Offor Stem Splitter supports the following export formats:

- WAV
- FLAC
- AIFF

The appropriate format depends on the user's workflow.

---

29. WAV Export

WAV is recommended for most music-production workflows.

WAV is widely supported by:

- Cubase
- FL Studio
- REAPER
- Ableton Live
- Studio One
- Pro Tools
- Other professional DAWs

For DAW production, WAV is generally the safest choice.

---

30. FLAC Export

FLAC is a lossless compressed audio format.

It can reduce file size while preserving the audio information.

FLAC is useful when you want lossless audio while using less storage than an uncompressed WAV file.

---

31. AIFF Export

AIFF is another lossless audio format supported by many professional audio applications.

Use AIFF when your production workflow specifically prefers the format.

---

32. Normalize

The **Normalize** setting controls whether exported audio is normalized according to the application's export behavior.

Normalization can be useful when you want exported audio brought to a more standardized level.

For professional mixing, users may prefer to leave normalization disabled and perform gain staging inside their DAW.

---

33. Recommended Export Setting

For most producers:

Format: WAV

is the recommended starting point.

After export:

```
Offor Stem Splitter
        ↓
      WAV
        ↓
       DAW
        ↓
Gain Staging / Mixing / Production
```

---

34. Keeping Stems in Sync

All stems generated from the same separation are intended to remain aligned to the original timeline.

For example:

```
00:00 ──────────────────────────── Song End

Vocals ──────────────────────────
Drums  ──────────────────────────
Bass   ──────────────────────────
Other  ──────────────────────────
```

When importing stems into a DAW:

- Start them at the same timeline position.
- Do not independently trim one stem unless intentionally editing it.
- Do not accidentally move one stem.
- Avoid automatic time-stretching that changes timing.
- Keep the stems from the same separation together.

If imported correctly, the stems are intended to play together with the original timeline.

---

35. License Activation

Offor Stem Splitter includes a license activation system.

The application uses its license-management system to determine whether the software has been activated.

The basic process is:

```
User
 │
 │ Enters License Key
 ▼
Offor Stem Splitter
 │
 ▼
License Manager
 │
 ▼
License Verification
 │
 ├── Valid → Activated
 │
 └── Invalid → Activation Failed
```

---

36. Opening the Activation Interface

To activate Offor Stem Splitter:

1. Open **SETTINGS**.
2. Locate the **LICENSE** section.
3. Select the activation control.
4. Enter your license key.
5. Submit the key.

If the license is valid, the application will display the appropriate activation result.

---

37. Successful Activation

After successful activation:

- The license is accepted.
- The application's license state is updated.
- The Settings interface reflects the activated state.
- Licensed functionality becomes available according to the applicable license.

Activation is intended to persist so that users do not normally need to repeatedly enter the same license key.

---

38. Invalid License

If a license is rejected, possible causes include:

- Incorrect license key
- Typing error
- Extra characters
- Invalid license
- Expired license
- Activation limit reached
- Internet connection problem
- Licensing service unavailable
- Server-side verification problem

First verify that the key was entered correctly.

If a valid key still fails to activate, contact Offor Audio support.

Never publish your complete license key publicly.

---

39. Internet Communication

License verification may require communication with the licensing service.

Licensing communication is separate from the audio-production workflow.

The DAW does not participate in Offor Stem Splitter license activation.

The activation relationship is:

```
Offor Stem Splitter
        │
        │ License Verification
        ▼
Licensing Service
```

It is not:

```
Offor Stem Splitter
        │
        ▼
Cubase / DAW
```

---

40. Free Usage and Licensing

Offor Stem Splitter may use a free-use allowance before activation is required.

When the applicable free-use allowance has been reached, the application may require activation according to the current licensing policy.

Users should follow the licensing information presented by the application and the official Offor Audio purchase/activation process.

---

41. Privacy and Audio Processing

Offor Stem Splitter is an audio-processing application.

Users should rely on the application's current implementation and official privacy information for the exact handling of:

- Audio files
- License information
- Update checks
- Application information
- Other network communications

Users should not assume that all application communication is offline unless this has been confirmed by the current implementation.

---

42. Third-Party Technology

Offor Stem Splitter may use third-party technologies, including:

- JUCE
- Audio libraries
- AI/source-separation technologies
- Runtime components
- Open-source software

Third-party technologies remain subject to their respective licenses.

Offor Audio does not claim ownership of third-party software merely because it is incorporated into or used by the product.

The final product distribution should include the applicable third-party notices and license information.

---

43. Copyright and User Responsibility

Offor Stem Splitter is an audio-processing tool.

Users are responsible for having the necessary rights to process the audio they use.

Purchasing or using Offor Stem Splitter does not automatically grant permission to:

- Copy copyrighted recordings
- Distribute copyrighted recordings
- Sell copyrighted recordings or stems
- Upload copyrighted material
- Remove copyright protection
- Infringe the rights of recording owners

Users are responsible for complying with applicable copyright laws and the rights associated with their source recordings.

---

44. Separation Artifacts

Source separation can produce artifacts.

Common examples include:

Vocal Bleed

Small amounts of instruments may remain in the vocal stem.

Instrument Bleed

Vocal or other musical material may remain in an instrumental stem.

Metallic Sound

Some material may sound artificial or metallic after processing.

Watery or Phase-Like Sound

Complex sustained sounds may occasionally produce watery or phase-like artifacts.

Reverb Bleed

Reverb from the original mix may appear across multiple stems.

Drum Bleed

Transient sounds can be difficult to isolate completely.

Stereo Artifacts

Wide stereo effects can be difficult for source-separation systems to isolate perfectly.

These effects do not automatically indicate that the application is malfunctioning.

---

45. Improving Separation Results

For better results:

1. Use the highest-quality source available.
2. Prefer WAV or other lossless audio.
3. Avoid heavily clipped recordings.
4. Avoid unnecessary processing before separation.
5. Allow processing to finish completely.
6. Solo individual stems.
7. Check difficult sections.
8. Use your DAW for final cleanup.

---

46. Using Your DAW to Improve Stems

After importing the stems into your DAW, you can use normal production tools to improve them.

Vocals

- EQ
- Compression
- De-essing
- Noise reduction
- Reverb
- Delay

Drums

- EQ
- Compression
- Transient shaping
- Saturation
- Gating

Bass

- EQ
- Compression
- Saturation
- Sidechain processing

Other

- EQ
- Stereo processing
- Filtering
- Automation
- Creative effects

Offor Stem Splitter performs the source separation.

Your DAW remains the environment for final mixing and production.

---

47. Automatic Update Checking

Offor Stem Splitter includes an **update-checking system**.

The application can check whether a newer version of the software is available.

Update checking is intended to help users stay informed about:

- New releases
- Bug fixes
- Performance improvements
- Feature improvements
- Stability updates

When an update is available, users should follow the update information provided by the application and obtain releases through official Offor Audio channels.

---

48. Why Updates Matter

Keeping Offor Stem Splitter updated can provide access to:

- Bug fixes
- Improved application stability
- Performance improvements
- UI improvements
- Separation improvements
- Export improvements
- New functionality

Users should use official Offor Audio releases rather than modified or unofficial copies.

---

49. Troubleshooting — Application Will Not Start

If Offor Stem Splitter does not start:

1. Restart Windows.
2. Try launching the application again.
3. Confirm that the installation completed correctly.
4. Check Windows Security.
5. Check whether antivirus software has quarantined an application component.
6. Make sure application files have not been deleted or moved.
7. Reinstall the official application if necessary.

If the problem continues, contact support.

---

50. Troubleshooting — Separation Does Not Start

Check that:

- An audio file has been loaded.
- The audio file is supported.
- The application is not already processing another file.
- Your applicable free-use allowance has not been exhausted.
- Your license is activated if activation is required.
- Your computer has sufficient available resources.
- Sufficient disk space is available.

---

51. Troubleshooting — Processing Appears Frozen

Do not immediately terminate the application.

Source separation can require significant processing time.

Check:

- CPU usage
- Memory usage
- Application status
- Progress information
- Disk activity

Longer audio naturally requires more processing.

If the application becomes completely unresponsive for an unreasonable amount of time, restart it and report the problem to Offor Audio support.

---

52. Troubleshooting — Activation Does Not Work

Check:

1. Internet connection.
2. License key.
3. Extra spaces.
4. Correct characters.
5. License status.
6. Whether the activation limit has been reached.
7. Whether the licensing service is available.

If everything appears correct and activation still fails, contact support.

Never send your complete license key through a public forum or social-media post.

---

53. Troubleshooting — Update Problems

If the application reports an update problem:

1. Check your Internet connection.
2. Restart Offor Stem Splitter.
3. Check whether the official update service is available.
4. Do not download modified application files from unofficial sources.
5. Use the official Offor Audio release if a manual update is required.

If the problem continues, contact support.

---

54. Troubleshooting — Cubase Cannot Find Offor Stem Splitter

This is expected in the current release.

Offor Stem Splitter is a **Standalone application**, not a VST3 plugin.

You do not need to install Offor Stem Splitter as a VST3 plugin to use it with Cubase.

Instead:

```
Offor Stem Splitter
        ↓
Export Stems
        ↓
Cubase
```

---

55. Troubleshooting — Stems Are Out of Sync

Verify:

- All stems came from the same separation.

- All stems were exported from the same source.
- They were imported at the same timeline position.
- One stem was not accidentally trimmed.
- The DAW has not automatically stretched one file.
- Sample-rate handling has not changed the intended timing.

If necessary, import the original song into the DAW as a reference and compare it against the stems.

---

56. Troubleshooting — Poor Separation

If the result is poor:

1. Try a higher-quality source.
2. Try the original WAV instead of a low-quality MP3.
3. Listen to different sections.
4. Check whether the problem exists throughout the recording.
5. Check the individual stems using Solo.
6. Use your DAW for additional cleanup.

Some recordings are naturally more difficult to separate than others.

---

57. Troubleshooting — Export Problems

If an export fails:

- Check available disk space.
- Check that the output location is accessible.
- Try another export format.
- Restart the application.
- Try exporting again.

If the problem continues, contact support.

---

58. Reporting Bugs

Offor Stem Splitter is continuously improved through testing and user feedback.

If you discover a bug, please report it rather than assuming that the problem is your computer.

Useful bug reports should explain:

Expected Behavior

What should have happened?

Actual Behavior

What actually happened?

Reproduction Steps

What actions cause the problem?

Error Message

Provide the exact error message whenever possible.

Screenshot

Attach a screenshot when useful.

---

59. Example Bug Report

```
Subject: Offor Stem Splitter — Bug Report

Product:
Offor Stem Splitter

Version:
1.0.0

Windows:
Windows 11 Pro

CPU:
[Your CPU]

RAM:
[Your RAM]

GPU:
[Your GPU]

Audio:
WAV, 4:25
```

```
Expected Behavior:
The separation should finish normally.

Actual Behavior:
The separation stops progressing.

Steps:
1. Open Offor Stem Splitter.
2. Load a WAV file.
3. Start separation.
4. Wait for processing.
5. The progress stops.

Error Message:
[Exact error message]

Screenshot:
Attached.
```

Providing this information makes bugs significantly easier to investigate.

---

60. Feature Requests and Feedback

Users can also provide suggestions for future versions.

Useful feedback should explain:

1. What you want.
2. Why you need it.
3. How you currently accomplish the task.
4. What DAW or workflow you use.

Specific feedback is more useful than simply saying:

> "Add more features."

Offor Audio can use practical user feedback to prioritize future improvements.

---

61. Support Contact

For support, bug reports, activation problems, product questions, and feedback:

OFFOR AUDIO SUPPORT

Email: chezchrisapp@gmail.com

WhatsApp: +233 53 084 2130

Website: www.checris.com

Support / Payment: https://www.paypal.com/ncp/payment/75JCGB569TXGN

When contacting support, provide as much relevant information as possible.

---

62. How to Contact Support Effectively

Please include:

Product: Offor Stem Splitter

Version: 1.0.0

Operating System: Your Windows version

CPU: Your CPU

RAM: Your RAM

GPU: Your GPU, if applicable

Audio Format: WAV / FLAC / MP3 / etc.

Audio Length: For example, 4 minutes 32 seconds

Problem: Describe what happened.

Steps: Explain what you clicked or did before the problem occurred.

Error: Copy the exact error message.

Screenshot: Attach one when possible.

This information helps support reproduce and investigate the issue faster.

---

63. License Support

For license-related problems, provide:

- Purchase email/account where applicable
- Purchase/order reference where applicable
- Offor Stem Splitter version
- Windows version
- Error message
- Screenshot

Do not publish or send your complete license key through an insecure public channel.

If support requires license information, follow the instructions provided through the official support channel.

---

64. Protect Your License

Your license key should be treated as private information.

Do not:

- Post it publicly.
- Share it on social media.
- Upload screenshots showing the complete key.
- Send it to strangers.

If you believe your license has been compromised, contact Offor Audio support.

---

65. Recommended Producer Workflow

For professional use:

```
STEP 1
Choose the highest-quality source.

        ↓

STEP 2
Load it into Offor Stem Splitter.

        ↓
```

```
STEP 3
Start separation.

        ↓

STEP 4
Wait for processing to finish.

        ↓

STEP 5
Solo and mute stems.

        ↓

STEP 6
Inspect difficult sections.

        ↓

STEP 7
Select WAV export.

        ↓

STEP 8
Export the stems.

        ↓

STEP 9
Open your DAW.

        ↓

STEP 10
Import the stems.

        ↓

STEP 11
Mix, edit and produce.
```

---

66. Quick Start Guide

If you already understand audio production:

1. Launch Offor Stem Splitter.
2. Load your audio.
3. Start separation.
4. Wait for processing.
5. Review the stems.
6. Use Mute and Solo to inspect individual sources.
7. Check difficult sections using playback and Loop Selection where appropriate.
8. Open Settings.
9. Select the desired export format.
10. Export the stems.
11. Open your DAW.
12. Import the exported stems.
13. Begin production.

---

67. What Offor Stem Splitter Does Not Do

Offor Stem Splitter does not replace a complete DAW.

It is not designed to:

- Replace Cubase.
- Replace FL Studio.
- Replace REAPER.
- Replace Pro Tools.
- Automatically mix an entire project.
- Guarantee perfect recovery of original studio multitracks.
- Guarantee artifact-free separation.
- Give users copyright ownership of processed recordings.

Its primary purpose is:

Audio source separation and stem preparation.

---

68. Product Ownership

Offor Stem Splitter is an OFFOR AUDIO product developed and distributed by **ONNTECH**.

The OFFOR AUDIO name, product branding, original application interface, and original software components are protected according to applicable intellectual-property laws.

Third-party technologies remain owned by their respective authors and organizations.

Copyright

© 2026 ONNTECH / OFFOR AUDIO. All rights reserved.

Official Website

www.checris.com

---

69. Terms of Use

Use of Offor Stem Splitter is subject to the applicable product terms and licensing conditions.

Users are responsible for complying with:

- License restrictions
- Copyright law
- Applicable usage rights
- Restrictions associated with source recordings

The purchase or activation of Offor Stem Splitter does not transfer ownership of third-party recordings or copyrighted material.

---

70. Refunds

Refunds, where applicable, are governed by the applicable purchase terms and payment provider policies.

For purchase-related questions, contact Offor Audio support.

Support Email: chezchrisapp@gmail.com

WhatsApp: +233 53 084 2130

---

71. Third-Party Notices

Offor Stem Splitter may depend on third-party software and technologies.

These may include:

- JUCE
- Audio-processing libraries
- Source-separation technologies
- AI models
- Runtime components
- Open-source components

Third-party software remains subject to its applicable license.

Users should consult the third-party notices distributed with the application where applicable.

---

72. Frequently Asked Questions

Is Offor Stem Splitter a VST3 plugin?

No. The current version is a standalone Windows application.

Can I use it with Cubase?

Yes. Export the separated stems and import or drag them into Cubase.

Does Cubase need Offor Stem Splitter installed as a plugin?

No.

Can I drag the exported stems into my DAW?

Yes, provided the DAW supports the selected export format.

Does the application create the original studio tracks?

No. It estimates the individual sources from the mixed recording.

Will every song separate perfectly?

No. Results vary depending on the source recording.

What export format should I use for music production?

WAV is generally recommended.

Can I export FLAC?

Yes.

Can I export AIFF?

Yes.

Can I mute a stem?

Yes. Each stem can be muted for playback review.

Can I solo a stem?

Yes. Solo is useful for inspecting individual separation results.

Can I loop a difficult section?

Yes. Loop Selection is available through the Settings/playback workflow.

Does Offor Stem Splitter have Auto-play?

Yes. Auto-play is available in Settings.

Does Offor Stem Splitter check for updates?

Yes. The application includes an update-checking system.

Do I need Internet access to activate?

License verification may require Internet communication with the licensing service.

Is the DAW involved in activation?

No. License activation is handled separately from the DAW.

Is my license key sent to my DAW?

No. The DAW does not participate in license activation.

Does source separation always produce clean stems?

No. Source separation is an estimation process and artifacts or bleed can occur.

Can I use the stems commercially?

That depends on your rights to the original recording. Offor Stem Splitter does not transfer copyright ownership of the source recording.

What should I do if I find a bug?

Report it to Offor Audio support with the application version, Windows version, steps to reproduce the issue, exact error message, and screenshots where possible.

---

73. Updates

Future Offor Stem Splitter updates may contain:

- Bug fixes
- Performance improvements
- Separation improvements
- Stability improvements
- UI improvements
- Export improvements
- New features
- Improved workflows
- Additional supported formats

Only install official Offor Audio releases.

The application includes update checking to help users identify newer versions.

---

74. Installation Advice

Keep the application installed in a stable location.

Do not manually delete application files.

Do not rename internal application files unless instructed by Offor Audio support.

When installing an update, follow the official installation instructions.

Use the official installer distributed by Offor Audio.

---
